

Windows 95/98/ME

Dial-up Networking Instructions

April 2003

These instructions will set up Dial-up Networking in Windows 95/98/ME.

Before you begin:

Connect your computer's modem to the phone line in your home. Most modems have two jacks for phone cords. The phone cord from the wall needs to be plugged into the jack marked **line**.

The set up procedure for Windows 95/98 and Windows ME is very similar. These instructions will help you set up dial-up networking for these versions of Windows.

Step 1:

Windows 95/98

Find the desktop icon labeled **My Computer** and **double-click** it.

Click on the **Dial-up Networking Icon** inside the My Computer window.

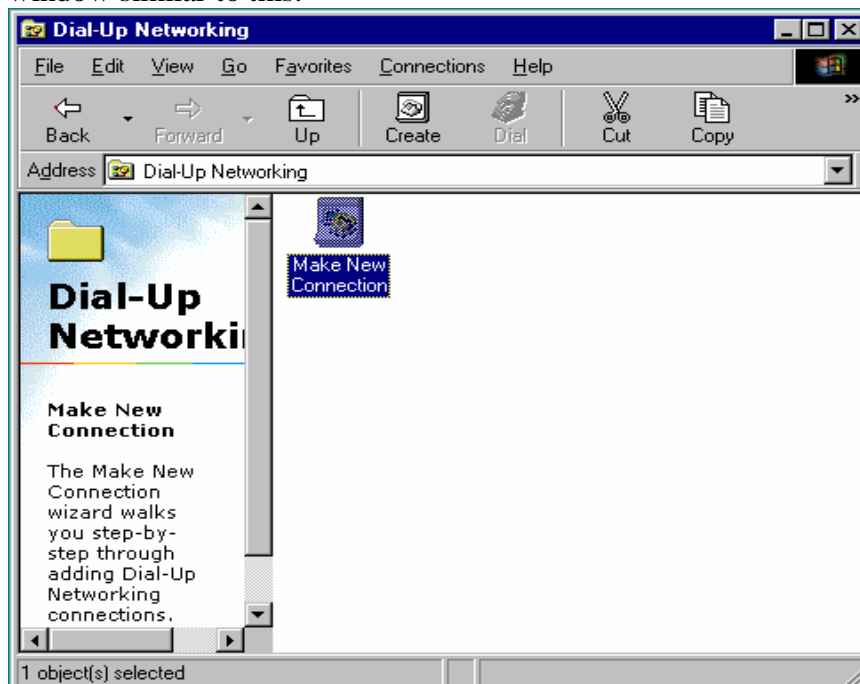

Windows ME

Click the **Start** menu.

Click **Settings**.

Click **Dial-up Networking**.

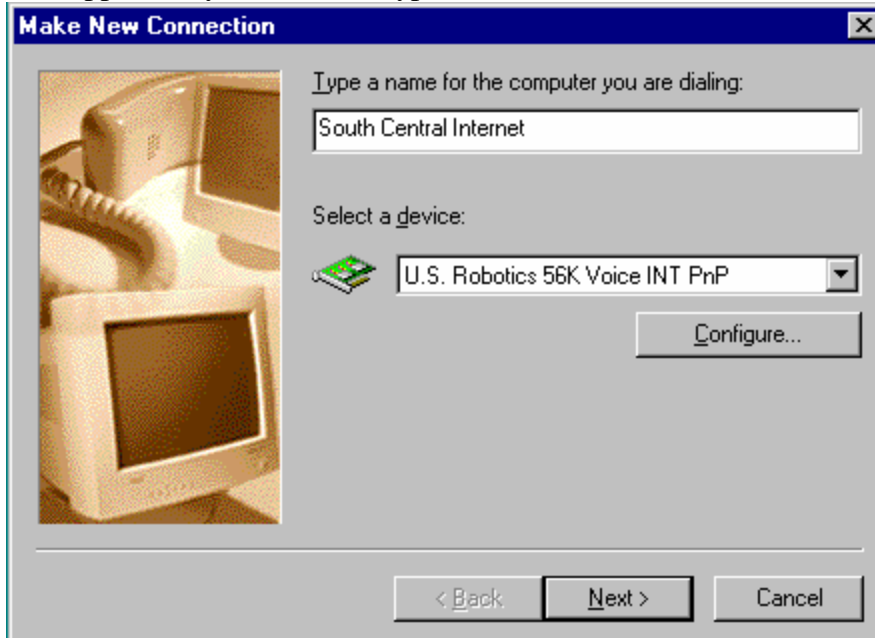

You will see a window similar to this:

Double-click on **Make New Connection**.

Step 2:

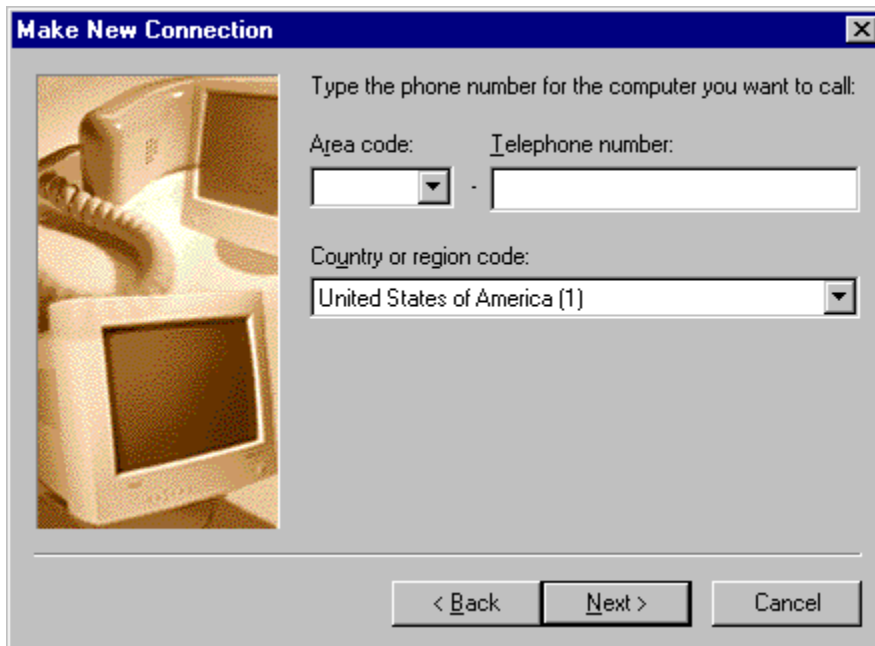

The following will appear on your screen. Type in **South Central** as the connection name.

Click **Next**.

You will be prompted to enter the access phone number for your area. Please find the access number for your area on the table below and enter it.

TO AVOID LONG DISTANCE CHARGES, PLEASE IDENTIFY AND ENTER THE CORRECT ACCESS NUMBER FOR YOUR AREA. *DO NOT ENTER AN AREA CODE

Click **Next** to continue.

South Central Access Phone Numbers

Cedar City and local areas (i.e. Parowan, New Harmony, Enoch)	867-2860
St. George and local areas (i.e. Hurricane, Santa Clara, Ivins)	986-5760
Richfield and local areas (i.e. Salina, Monroe, Aurora)	893-2300
Beaver	386-0155
South Central Utah Telephone Customers: If South Central Communications is your local telephone company (i.e. You live in Kanab, Orderville, Bryce Valley, Escalante, Panguitch, Duck Creek, Enterprise, Milford, Piute & Wayne counties, etc), your access number will be the local three-digit prefix of the area you live in plus 0155. For example: Kanab residents will dial 644-0155, Milford residents 387-0155, Bicknell residents 425-0155, Escalante residents 826-0155.	###-0155 ### = Your local 3-digit prefix

* You may enter an area code to access South Central Internet via long distance from outside the local Internet coverage area.

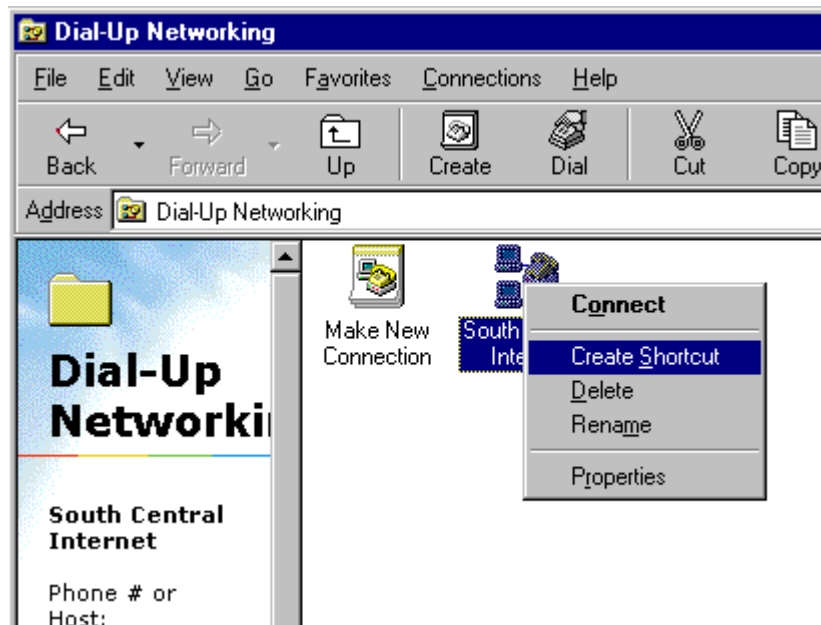

Your new dial-up connection has been created.

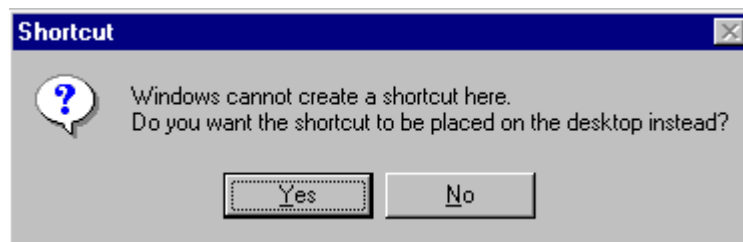

Click **Finish**

Step 3:

Right-click once on the South Central icon that has been created. A menu will appear, choose **Create Shortcut**.

You will see this box appear.

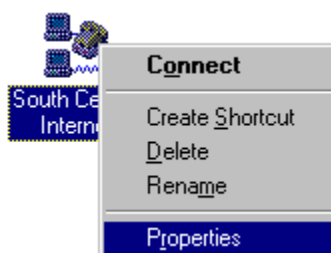

Click **Yes**. This creates a shortcut icon to South Central on your desktop.

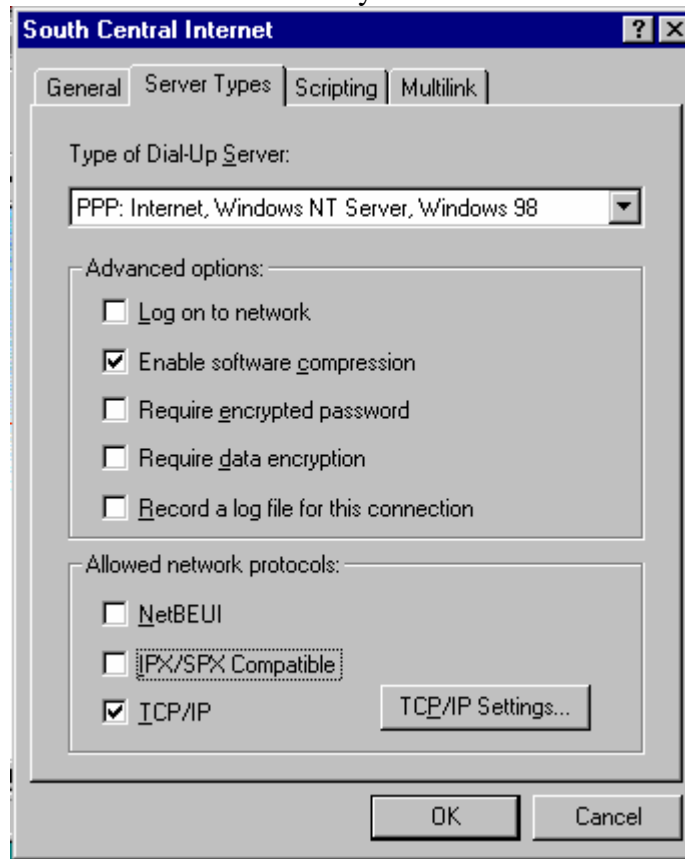

NOTE: Windows ME users may skip the remaining steps.

Step 4:

Right-click the South Central icon again.

The South Central Properties box will appear. Click the **Server Types** tab (Note: **Server Types** is a button in Windows 95.) Modify your settings to appear as shown below. (Enable software compression and TCP/IP should be checked. Any other checks should be removed.)

Click **OK**.

Your dial-up networking connection has been created.

If you would like to set up your South Central mail account now, refer to South Central Tech Support or to our online email account setup instructions available at <http://www.scinternet.net/support>

Via Phone:

Cedar City area: (435)-463-0245

St. George area: (435)-467-0245

Richfield area: (435)-896-8889

SCUTA area

(South Central is your local phone provider): 611 ext 244

Fax: (435)-867-5237

Information about Dial-up Speeds and Connectivity

Dial-up speeds are determined by several factors including modem speed and connection quality. Our modems are 56K v.92 modems. Most customers connect at speeds between 40K and 50K. Customers with older modems, in rural areas, or with poor quality phone lines may connect at lower speeds.

If you experience trouble getting connected or staying connected, consider updating your modem drivers to the latest version offered by your computer/modem manufacturer. Please contact South Central Tech Support for more assistance if necessary.

Visit <http://www.scinternet.net/support> for more information about dial-up connections.
